Conclusions, opportunities and challenges

Frankish annals of the eighth and ninth centuries still resist a consensual scholarly synthesis on several aspects. This conference aims to bring together new approaches and future perspectives for the study of annals. Starting with a review of the fundamentals of the genre, papers will move on to changes in narrative techniques, address the importance of codicological contexts, dissemination, and the practice of rewriting. Particular attention will be paid to the challenges annals are posing to editors, as the many nineteenth-century editions still in use are less and less suitable for a variety of present-day approaches. In all, the conference hopes to contribute to a better understanding of history writing in early medieval Europe.
